

## MATHLETICS

Mathletics is a stimulating and exciting way for students to learn – and improve – their maths. Regarded as the “next generation in learning” it is Australia’s most used educational website. The interactive program engages students and motivates them to learn. It is easy to use and students can work through the curriculum at their own pace, while being challenged at the same time. Each student’s progress can be monitored and assessed, whether the self paced learning in the computer laboratory, drills, tests or homework. Best of all, students have access to it any time, any day of the week, providing the perfect link between home and school.

Mathletics is used in Years 4 through to 10.
